

My name is Ayush and I am a student in my final year of my undergraduate degree in BSc-IT. I am on track to graduate in 2023 with a bachelor's degree. My career focus is on computer engineering, as I believe that this field will allow me to make a positive impact on the world.

To me, being a good person is of utmost importance. I often reflect on my actions and ask myself if I have been a good friend, brother, or son. I place great importance on my physical and mental well-being, as this is what truly matters to me. My goal is to continuously strive for self-improvement and to avoid repeating past mistakes.

Growing up, I wished that I had people with similar values and interests in my life. Unfortunately, I did not have access to many opportunities because I was unable to connect with people who shared my passions. For example, I was interested in kickboxing, but I could not find classes nearby and my friends and family were not familiar with the sport. To this day, I regret not pursuing my interests as a child.

That's why after I complete my master's degree, I plan to create a platform where people with similar interests can connect and support each other's personal and professional growth. This platform will provide an opportunity for people to find others with whom they share interests, and to gain access to resources and opportunities that they may have otherwise missed.

Another career goal of mine is to establish a not-for-profit organization that provides laptops and computers to students in India. Additionally, I plan to offer free education to support marginalized communities, particularly in rural areas where access to technology is still limited. This will help bridge the digital divide and provide equal opportunities for all students in India to reach their full potential.

I have chosen the BSc-IT degree program as an essential step in my career journey. I believe that this cloud-based program will provide me with the necessary skills and knowledge to achieve my professional goals and aspirations. This degree will allow me to become an expert in the field of computer engineering, and to make a meaningful difference in the world.
